

AIRPOWER

Mobile Power Storage

COMPRESSED AIR TECHNOLOGY

« Because
sustainability must be
accessible to all »

Secure: The approved tank complies with the existing UN ECE R110. The new composite tanks are made of carbon fiber and resin, very resistant and without fragmentation in the event of an accident.

Inexpensive: As part of the «zero emission» solutions, the air tank is much cheaper to purchase than other systems.

Adaptative: Different capacities according to the needs, from a few liters to several hundred liters compressed to 248 bars.

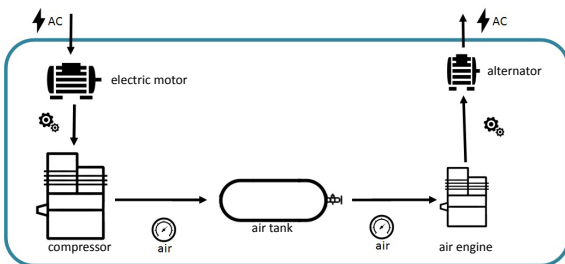

Reliable: Designed for more than 20,000 cycles, which means more than 50 years of use! A filling test must be carried out every 5 years.

Emergency generator

Mainly intended for a professional environment, the AirPower is an ideal ally for meeting a specific or immediate need for power.

To triple the autonomy of its systems with the same amount of air, MDi patented a dual energy mode.
